Profile

A highly motivated and detail-oriented IT Web Developer with a passion for developing new and effective web solutions. Looking for a challenging role where I can use my solid background in programming languages, web development technologies, and problem-solving techniques. Dedicated to being up to date with industry developments and constantly improving my skills in order to offer innovative web applications and contribute successfully to dynamic projects. Eager to work with a creative team to develop user-focused, responsive, and scalable digital solutions that both meet and surpass customer needs

Education

Bachelor of Science of Information Technology,
Technological Institute of the Philippines

06/2017 – 04/2021
Manila, Philippines

Professional Experience

Glacier Integrated Logistics Inc.

Mid Web Developer

As Mid Web Developer, I am responsible to develop, improve, and maintain all internal systems of Glacier Megafridge. Also, I'm in charge to guide other junior developers by giving them the proper process, ideas, and techniques in development.

11/2022 – Present
Parañaque, Philippines

Web Developer

As a Web Developer, I am responsible to develop, improve, and maintain all internal systems of the company.

08/2021 – 11/2022
Parañaque,
Phillippines

Projects

WMS, Warehouse Management System

Developed and maintained the company's primary service delivery system built on a CMS with RESTful architecture using PHP, MySQL, HTML, CSS, Bootstrap, and jQuery. Led its redevelopment using the MVC design pattern while retaining the same stack. Currently leading the development of a new Warehouse Management System (WMS) with Laravel and Livewire, following the TALL stack approach.

CP, Customer Portal System

Developed an MVC-based B2B storage platform enabling clients to perform inbound and outbound transactions and track their products through the warehouse management system. Built with PHP and MySQL for the back end, and HTML, CSS, Bootstrap, and jQuery for the front end.

VMMIS, Vendor Maintenance Management and Inventory System

Developed a Laravel-based system with Livewire, Bootstrap 5, jQuery, and MySQL, enabling efficient management of work orders, preventive and corrective maintenance (PMS & CM), and inventory control. Designed a centralized asset management module to consolidate information on asset history, status, costs, and documentation for improved decision-making.
